Welcome to accessibility testing

Discover how to make React Native components accessible to all users. Through practical examples and guided testing, learn essential techniques for creating inclusive applications.

Start testing

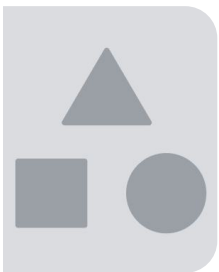
Select a category to test:

Another important component in accessibility is the usage of screen readers.

A

TalkBack (Android)

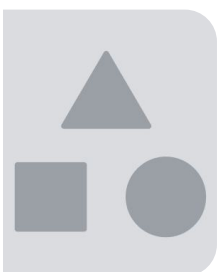
Basic gestures and navigation

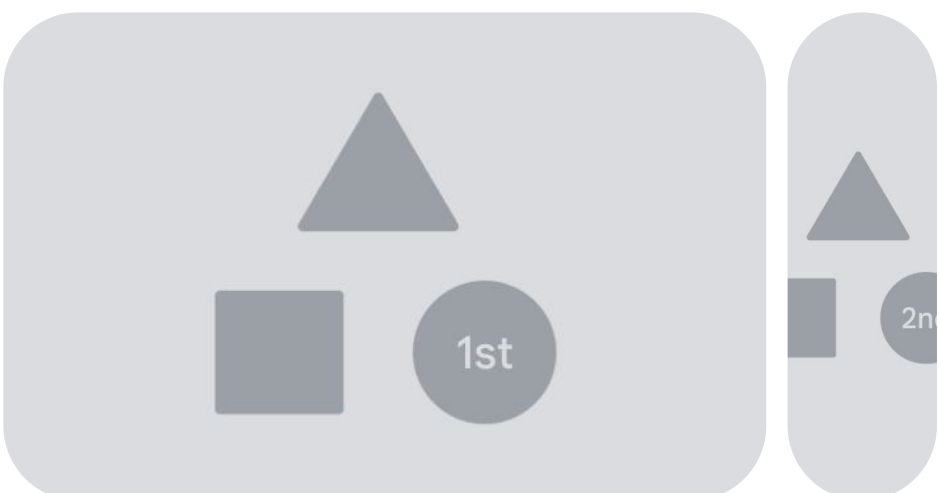


A

VoiceOver (iOS)

Essential commands and features



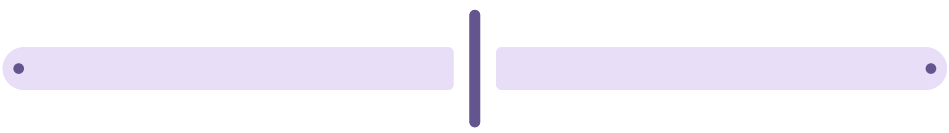


Enable screen readers

Here, different actions will be tested. Learn and test common gesture patterns.

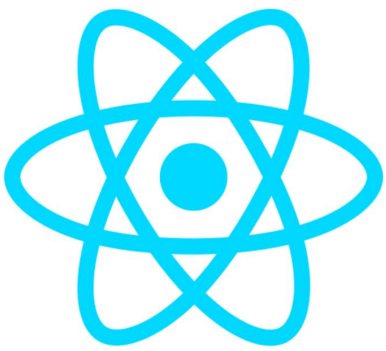
Snackbar giving succesful feedback

Test the contrast of your components in real-time (Link to WCAG contrasts)



Frameworks

React Native | Flutter



Brief description of framework's accessibility approach
